FOR IMMEDIATE RELEASE-

Billion Dollar Publisher Implements Storage Engine's Virtual Tape Library

TINTON FALLS, NJ, June 19, 2007—Storage Engine, Inc., a leading provider of fault tolerant enterprise data storage and document imaging solutions, today announced that it has deployed its Synchronism Virtual Tape Library (VTL) for a major publisher. VTL Backup|Recovery appliances are cost-effective, turnkey solutions that use disk to enhance the reliability, speed, and availability of backups, while consolidating the management and provisioning of backup resources. They provide comprehensive data protection for networked and direct-attached storage environments, facilitating backups to virtual tape in the traditional tape backup model while also providing the ability to perform continuous replication of data to disk.

The VTL Appliance optimizes the performance and reliability of backup/restore operations without requiring changes to be made to the existing backup software. It increases the speed and reliability of existing third party backup applications by using disks to emulate industry standard tape libraries. The VTL Appliance transfers data to and restores it from a disk-based virtual tape at ultra high speeds, and maximizes reliability by removing robotic mechanical failures and physical tape media errors.

Storage Engine is an open system provider of data storage solutions that can address a range of needs from HA data storage, centralization, multi-vendor/centralization, compliance, replication, virtualization and backup acceleration all with a cost effect price.

Contact us to see why so many users are switching to Storage Engine..

About Storage Engine:

Storage Engine, Inc., is a leading responsible provider of data storage solutions and document imaging solutions for enterprises and departments that serve a wide range of business and government markets along with a wide range of other services to enable the capture, tracking, storing, sharing, replication and utilization of information assets, with compliance, cost effectively.
